Redningsøvelse

Redningsøvelse!

In November 2016 the Norwegian Cave Rescue organization held their major exercise in «Ingeniørgrotta», a cave near Bonnå, about 80 km north of Bodø. There were 14 participants. The main features of the exercise were movement in constricted and sloping/vertical passages, rigging a double pitch and hoisting a member on a stretcher. The pitch has a severe constriction midway and a tricky entrance at the top. In addition, the logistics of transport to and from the cave over 1 ½ hours of rough terrain were tried out, in snowfall.
