Is-kollaps i Svarthammerhola

Ice-collaps in Svarthammerhola

The ice tunnel in the lower part of Svarthammerhola has collapsed due to an earlier rock fall in Autumn 2014 (NGB nr 63, 2014).

For many years it has been an attraction for cavers. Even though it is not possible to walk under the ice any longer, it should be well to think that the danger area since 2014 has now disappeared. People walking during that time in the tunnel were lucky not to have been accidentally injured in an incident.
