Vellykket kurs i enkelttausteknikk, Skuterud gruve

A successful SRT course in the Skuterud mines

10 persons participated in NGK's course in the abandoned cobalt mines of Skuterud. Two good pitches, 18 and 30 m respectively, were rigged in a part of the mine where the risk for rockfall is minimal. Severe collapses were observed in the Constantin surface shaft, and unexperienced persons are warned against doing SRT on their own.
