Sverrehola og andre grottefunn i Kobbelv-området

Sverrehola and other cave finds in the Kobbelv area

This area north of Fauske has been frequently visited since the find of Kolbjørndalgrotta (NGB no. 13, p. 16). It has now yielded one large cave; Sverrehola, partly surveyed and estimated to be c. 1000 m long and 70-80 m deep. One small cave, Dessverrehola, near by was choked after 30 m, - Other small caves were found along the south side of Leirfjorden.
