Vantracing: Pikhåggrotte No1 - Pikhågvassgrotta - Nedre Pikhågvatn

Water tracing from Pikhåggrotten No 1 to Lille Pikhågvatn

Direct connection between "Liten Bekk", sumping in the southern end of Pikhåggrotte No 1, and the small lake is proved by water tracing. The water probably enters Pikhågvassgrotta, but an attempt to trap the flourecein on charcoal in the stream here, was unsuccessful, because of technical failure of the equipment. A thorough water tracing will be carried out next year.
