Harbakkhulen

Harbakkhulen

Harbakkhulen is situated in Sør-Trøndelag county. The well known sea-cave lays about 110 m a.s.l. and has an entrance hall about 100 m long, 30 m high and 10 m wide. Beyond this a steep hill leads up to around 20 m above the entrance floor to two almost parallel narrow fissures. The left passage about 1 m wide continues for 30 m ending in a cylindrical 2 m diameter chamber about 3 m high. The right passage, 1 m wide in the beginning, continues for around 40 m where it becomes too narrow for further progress. This gives a total length of about 170 m cave length. The cave is formed in a fracture zone.
