Vern i Saltfjellet-Svartisen

Stortingsmelding 12:

A Governmental white Paper is published on the conflicting interests in the Saltfjell-Svartisen area in Nordland, conservation versus power production. For the first time in an official rapport caves and cavers occur, as one of a total of 5 power schemes very seriously threaten the Glomdal karst. In spite of being recognised as having karst features of international interest, the Government proposes to go ahead with the New Melfjord power scheme.
