Ei lita, men interessant grotte i grunnfjellsområdet i Narvik-fjellet

Ei lita, men

1000 m a.s.l. north of Cunojavre near the Swedish boarder in the Narvik region a cave has been investigated and surveyed by the Wøllos. According to Rolf Romer, Luleå, this limestone is particularly old being part of the Baltic shield. The age is estimated to 2,3 bill. years, metamorphoses 1,6 -1,8 bill. years and 0,4 bill. years ago. The cave is surveyed to 150m through two narrow squeezes. Other openings are reported but as yet unchecked.
