Nedre Kvanndalshola, Skjerstad kommune

This is a story about a cave which previously has not been visited. The cave is not far away from Kvanndalshola, and is therefore called Nedre (Lower) Kvanndalshola. After two attempts, and a little digging, they managed to find a passable entrance. The cave was a typical stream-cave, with lots of potholes. The length is estimated to 400-500 metres.
