Marmorgrotten og Ømmertjernbekkgrottene

Marmorgrotten & Ømmertjernbekkgrottene, Rana district, Nordland

The following report and survey have languished in the archives of the Norwegian Cave Index and Bibliography since 1974. An annotated bibliography of first Marmorgrotten and then the nearby underground course of the Ømmertjernbekk is appended. Marmorgrotten was surveyed by the NTHRLGK (the Cave Research Group of the Norwegian Technical University's Rover Scouts) in 1974. The main entrance is about 60 m east of the lowest resurgence of Ømmertjernbekken. Altitude 192 metres above sea. Length 210 metres. No tackle is required to explore the cave. The NTHRLGK also photographed the cave and made an 8 mm cine film.
