Grotter i Konnerud

Caves in Konnerud

Between Oslo and Kongsberg the Drammen area appears to be the most interesting. Several known and less well-known limestone caves can be found.

Svarterudbekkgrotte no. 1 is a small marble river cave. Caves no. 2, 3 and 4, and some other small caves are less impressive. The author first visited these caves in 1993 after having searched for more than a year. However, they had already been visited in the 1970's (Ref. 1). There are fine karren occurrences in the area, partly spoilt by roads having been built on top.
