Marmorstriper på Burfjellet

Stripe karst at Burfjellet

The caves in Burfjellet have been described in several NGBs, and the discoveries made in the summer of 2007 indicate that there is more to come. There are good geological maps of the area, i.e. 1927-I, Mo i Rana (1:50.000). It's recommended to purchase it from www.ngu.no if you want to take part in the Swedish-Norwegian meeting in 2008 or participate in the exploration of the area in the years to come.
