

Disto A3 omskapt til DistoX

Disto A3 transformed to Disto X

With the use of a Disto A3 and a printed circuit board bought from Beat Heeb in Switzerland, NGF-member Hans Øivind Aarstad has assembled the new instrument for cave-surveying, called DistoX. The main problem was how to accomplish such small-scale engineering, but with steady hands and a strong magnifying glass in the right eye, he managed to create it (he is very good at it!). The instrument can be bought through NGF, each one provided with a serial number, starting with NGF1. DistoX gives cavers possibilities to create cave maps with a much higher degree of accuracy, than with normal, handheld instruments.
