

Grottekartlegging med TDS Recon og Pocet Topo

Cave surveying with TDS Recon and Pocket Topo

The article takes a closer look on which PDA and software is suitable for cave surveying in combination with DistoX. The choice of PDA depends on which operative system you want to use, which again depends on which cave survey software you want to use. The chosen equipment which is tested in the cave, is the Recon TDS and PocketTopo. The rugged Recon with a good battery solution is well suited for use in caves. PocketTopo is easy to use, and with the opportunity to do drawings on the screen and measure unlimited side shots from each station, this is probably the best cave surveying software today.
