Slammerbekkgrottene

Slammerbekkgrottene

In connection with the Norway meeting in Burfjellet 2008 Il Gruppo Grotte Brescia (GGB) from Italy surveyed three caves in the valley Slammerbekkdalen. The article documents what they did. They mapped three caves, with a combined length of 1690 meters. The longest is Antares with 793 meters. In autumn 2008 GGB registered the data in Compass and made 3 plan maps and 3 vertical maps. NGF v/Hans Øivind Aarstad received a copy of the maps, sketches and several photos from the days they spent in Burfjellet. Thanks to the GGB because they sent a copy of the material to Norway.
