The caves of Norway

The data in table 1 and 2 in the article has been abstracted from the Norwegian Cave Index and Bibliography which was started in 1963 by David and Shirley St Pierre. About 1551 karst caves and 525 caves in non-calcareous rocks have been recorded in a card index. About 1851 references to karst and 507 references to non-karst caves are recorded in the bibliography. Copies of many of these are held in the compiler's library. The Cave Index and Bibliography are cross-referenced. Compilation of this from published reports, personal communications and personal investigations is ongoing so the numbers are incomplete. Any contributions should be kindly sent to David St Pierre, Tennant House, High Bentham, Lancaster, LA2 7AH UK. Email: david.stpierre@homecall.co.uk
