### **Speleologisk arbeid i Syd-Norge 1973-1980**

Speleological work in South Norway.

Since 1973 speleological work (biological collections, cave surveying, geological sampling, surveying and chemical studies) have been done in South Norway by the author. The different cave areas are listed, together with the different caves that are surveyed for scientific use. In all, about 2.400 m of cave have been surveyed in this part of the country. New caves, both in limestone and in non-limestone rocks are currently recorded by Norsk Grotteklubb.
