Eablering av 8 småkraftverk i Rana kommune

The establishment of 8 small water power plants in Rana kommune

Impact studies on plans for power plants in Rana have been made, some of them in marble and even with caves. The Norwegian Speleological Society wrote in their statement that one (Raudsandaksla) should not get a permit and that two others (Blakkåga and Farmannåga) should be studied further in the field before any conclusions could be made.
