Grottestudier i Nordland, Norge

Cave studies in Nordland, Norway

The theories of various workers on the origins of the caves in the Nordland area and the factors which have influenced their development are considered. The occurrence of calcium carbonate and other deposits in the caves is mentioned and the small amounts of fauna, flora and skeletal remains are described. A table of physical measurements and a list of cave systems are included.

The paper was first published by Shirley St Pierre in *Studies in Speleology*, Vol. 1, Part 5, December 1967, page 275-284. Because it is 40 years since the article was published, and in the memory of Shirley St Pierre who died, far too early, 20 years ago we republishes it with the permission from the editor and David St Pierre.
