Registrering av grotter og karst

Register caves and karst object

The purpose of the registration is to gather information about cave and karst objects in Norway. Registration will ensure that your findings will be taken care of and be given recognition. Unnecessary duplications will be avoided. Feel free to use the form to register caves, dolines and karren that you have already found, if it has not already been published in the NGB.

The form can be delivered to NGF (e-mail or letter). NGF will scan the form and register the information in NGFs cave database. NGF would use the information to have an overview of the caves in Norway, and in particular for our work with cave conservation and rescue. NGF can present the results in NGB. Presentations will be in such a form that concern for the protection and ongoing projects are taken care of.
